Borderless Connection

# Light partitions, tight connections. Better spaces for teams.

## From a sense of belonging to a culture of innovation

Subtle, adjustable boundaries, offer places for authentic conversations, that build trust, care and a sense of belonging. These powerful connections will help teams collaborate more effectively and contribute to a creative and innovative team culture.

reddot winner 2023

# A “room-within-a-room” to create diverse spaces

Lives Post + Beam is a simple, modular system that can shape a range of new spaces in the open-plan office. The post and beam structure helps define zones that invite teams into diverse settings. A comfortable ‘room within a room’ can help teams to share and connect together. The system is simple to install, and requires no major construction work.

## Open meeting area

Movable whiteboard panels together with chairs and tables on casters, create highly flexible spaces for meetings.

## Add a café setting

This central café zone combines a high counter bench and chairs for spontaneous catchups. Fixed panels shield working teams on one side and create a casual lounge zone on the other.

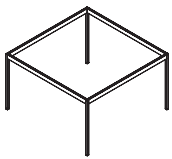

## Enhance a team project space

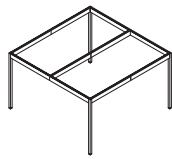

Create a comfortable working space for project teams—add shelves for shared work tools and supplies.

inches(mm)

\*<sup>1</sup> Standard length beams are a single piece

\*<sup>2</sup> Extended length beams are made of two interlocking pieces for easier assembly

# How it works

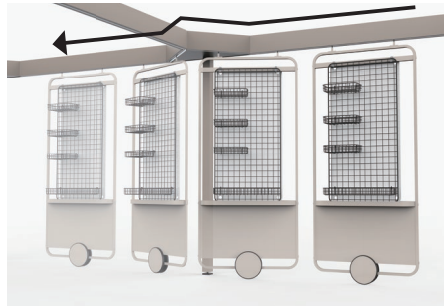

## Flexible layout changes

Light and easy to slide, the movable panels offer flexibility. Teams can simply adjust the boundaries for different activities or group sizes, at any time.

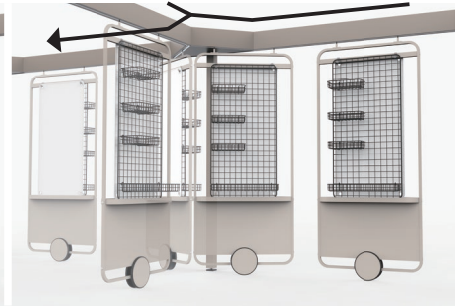

## Innovative angled rail

An angled rail allows movable panels to slide across the post. A T-junction 'turning bay' lets the team flip panels from front to back, or rearrange their order along the beam.

Sliding across the post

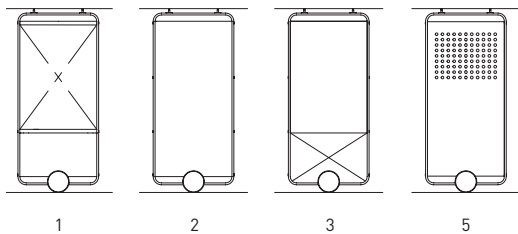

Flipping panels from front to back

# Panels

There are three types of panels: movable panels, fixed panels and full fixed panels. Full fixed panels are like an enclosed wall from beam to floor, while other panel types are semi enclosed, with a gap above and below. Open + spandrel panels can be equipped with accessories such as a whiteboard, a sound-absorbing felt board, or a transparent acrylic board that can be used for writing and that does not obstruct the view.

# Surfaces

Lives Post + Beam has a larger color and texture selection than conventional products, so matching office décor is easy. The matte-texture paint finishes work especially well with subdued interior styles.
